

2018 Pellet Gear BUYERS GUIDE

Welcome to the 2018 *Canadian Biomass Pellet Gear Buyers Guide*

The following information has been compiled to provide readers interested in developing or updating a wood pellet manufacturing facility with a reference tool of the major manufacturers and service providers for this industry in Canada. From fibre to pellet, the listing is a comprehensive source for equipment involved in the

pelletizing process.

The *Canadian Biomass Pellet Gear Buyers Guide* is organized into two sections. The first section is an alphabetical listing of companies that provide the relevant products or services for each of the following categories: dryers, pneumatic conveying, hammermills, pellet mills, screens and coolers, fire/spark

detection and suppression technology, bagging and palletizing, dies and rolls, quality control equipment and services, building contractors and engineering firms, Canadian ports for pellet exports, truck dumpers and moisture analyzers. The second section is an alphabetical listing of all the companies, with contact information for each. •
